

Китай**Sawn Timber**

Import Permits or Declarations	
Certification Requirements	Phytosanitary certificate required.
Prohibited Importations	
Bark	
Insects	Free of quarantine pests.
Fungi	Free of decay and other fungi.
Soil	Free from soil.
Other	Free of pathogenic micro-organisms, seeds, cultures of bacteria and virus and other harmful organisms.
Pre-shipment Inspections	Verification inspection required.
Approved Pre-shipment Treatments	Treatment efficacy shall also be confirmed by absence of live pest insects upon inspection at the port of entry into China.
Fumigation	Fumigation is required only when quarantine pests are present on the commodity. If fumigation is required it must be carried out no more than 15 days prior to shipment by sea, or no more than 15 days prior to arrival in China if transported by air or land.
Antisapstain treatments	
Insecticide treatments	
Heat treatments	
Preservative treatments	
Concessional Release	
General	If quarantine pests are found upon entry inspection timber may be treated at the importers expense, or may be reshipped.

Veneer

Import Permits or Declarations	
Certification Requirements	Phytosanitary certificate required for unprocessed and unpressed timber veneer which has not undergone heat treatment during the processing stage (See general comments below).

Prohibited Importations	
Bark	
Insects	Free of quarantine pests.
Fungi	Free of decay and other fungi.
Soil	Free from soil.
Other	Free of pathogenic micro-organisms, seeds, cultures of bacteria and virus and other harmful organisms.
Pre-Shipment Inspections	Verification inspection required for unprocessed and unpressed timber veneer which has not undergone heat treatment during the processing stage (See general comments below).
Approved Pre-shipment Treatments	Treatment efficacy shall be confirmed by absence of live pest insects upon inspection at the port of entry into China.
Fumigation	For unprocessed and unpressed timber veneer fumigation is required only when quarantine pests are present on the commodity. If fumigation is required it must be carried out no more than 15 days prior to shipment by sea, or no more than 15 days prior to arrival in China if transported by air or land.
Antisapstain treatments	
Insecticide treatments	
Heat treatments	
Preservative treatments	
Concessional Release	
General	<p>Where veneer products have been subject to heat treatment during the processing stage China does not require fumigation or any additional heat treatment for this type of products. The consignments can be cleared without a Phytosanitary certificate.</p> <p>If quarantine pests are found upon entry inspection timber may be treated at the importers expense, or may be reshipped, or destroyed.</p>

Logs

Import Permits or Declarations	
Certification Requirements	Phytosanitary certificate required.
Prohibited Importations	

Bark	Barked or De-Barked. For de-barked logs, tolerances for bark are; 5% on any individual log and 2% on any batch of logs.
Insects	Free of quarantine pests.
Fungi	Free of decay and other fungi.
Soil	Soil is prohibited. Soil clumps that are both thicker than 5mm. and greater than 25mm across must be removed. Particular attention must be given to the removal of organic soils.
Other	Free of pathogenic micro-organisms, seeds, cultures of bacteria and virus and other harmful organisms.
Pre-Shipment Inspections	Verification inspection required.
Approved Pre-Shipment Treatments	Treatment efficacy shall also be confirmed by absence of live pest insects upon inspection at the port of entry into China.
Fumigation	<p>Barked Logs only:</p> <p>In-hold fumigation with Phosphine: Initial fumigation must be at a rate of at least 2 gram per cubic metre. After 5 days a further top up of 1.5 grams per cubic metre is required. Treatment must maintain an in hold gas concentration of at least 200 ppm. for 10 days. The hold must be sealed for 10 days from commencement of fumigation. The date and time of degassing and opening of the hold shall be legally documented in the ships log. Logs carried in the ships hold may alternatively be fumigated using Methyl Bromide. For above deck cargo fumigation must be carried out using Methyl Bromide.</p> <p>Fumigated logs must remain segregated from untreated logs. Treated barked logs will be ineligible for phytosanitary certification if they are stowed with untreated logs. Debarked logs may be carried with untreated logs.</p> <p>Methyl bromide fumigation rates are: If entire logs and ambient temperatures are above 15 degrees C throughout fumigation, 80g/m³ for at least 16 hours. If entire logs and ambient temperatures are between 5 and 15 degrees C throughout fumigation, 120g/m³ for at least 16 hours.</p> <p>If fumigated on-shore, logs must be loaded onto ships within 36 hours of removing fumigation tarpaulins. If logs are to be fumigated more than 36 hours before loading they must remain covered.</p>
Antisapstain treatments	
Insecticide treatments	Alternative treatment required for barked logs only. Details of all insecticide treatment shall be documented by an additional declaration on the phytosanitary certificate.
Heat treatments	
Preservative treatments	

Concessional Release	
General	If quarantine pests are found upon entry inspection logs may be treated at the importers expense, or may be reshipped.

Wood Packaging Made from Coniferous Wood

Import Permits or Declarations	All wood packaging material arriving in China must comply with ISPM 15 GUIDELINES FOR REGULATING WOOD PACKAGING MATERIAL IN INTERNATIONAL TRADE
Certification Requirements	Phytosanitary certificate NOT required
Prohibited Importations	
Bark	
Insects	
Fungi	
Soil	
Other	
Pre-Shipment Inspections	
Approved Pre-Shipment Treatments	
Fumigation	All wood packaging material must be treated in accordance with ISPM 15
Antisapstain treatments	
Insecticide treatments	
Heat treatments	All wood packaging material must be treated in accordance with ISPM 15
Preservative treatments
